***Examiner's Amendment/Reasons for Allowance***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

***In the Abstract***

Insert:

--process validation, and model re-generation. A graphical user interface enables a user of a model generation tool to view and--.

***Reasons for Allowance***

2. Claims 1-21 are considered allowable since when reading the claims in light of the specification (MPEP § 211.01), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 1, including "graphical user interface" (supported at e. g. pages 9, lines 3-30 and 10, lines 1-26), "model generation tool" (supported at e. g., page 1, lines 22-26), "predictive model" (supported at e. g. page 2, lines 3-6), "source variables" (supported

at e. g. page 1, lines 22-26), "derived variables" (supported at e. g. page 1, lines 27-28), "contributory" (supported at e. g. page 18, lines 7-10) and "non-contributory" (supported at e. g. page 28, lines 1-6) wherein subgroups of variables can be viewed and managed and such variables include source variables associated with data attributes and derived variables that are modified by the source variables and such variables are grouped into subgroups with contributory and non-contributory features of the model generation tool. Inter alia, independent claim 7 discloses "historical data" (supported at e. g. page 9, line 13), "distribution of predictor variables associated with the data" (supported at e. g. page 11, line 11) and "strength of measurement" (defined at page 11, lines 11-16) wherein historical data about a system is modeled and distribution information is viewed using strength of measurement of the predictor variables.

The closest prior art (Cabena et al., Intelligent Miner for Data Applications Guide) teaches the interdisciplinary field of data mining related to machine learning, pattern recognition, statistics, etc. and predictive modeling. While Cabena coverage of the field of data mining is extensive and includes decision tree variables, regarding claim 1, inter alia, Cabena does not teach identifying subgroup variable containing variables that are contributory or non-contributory. Regarding claim 7, inter alia, Cabena does not teach a distribution of predictor variables being determined based on strength of measurement of the predictor variables.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
